

5 a cutter head releasably connected to said supporting unit, said
6 cutter head comprising

7
8 first and second circular blades having cutting edges;

9 first and second blade shafts respectively supporting said
10 ^{cf 2/29/2000} first and second ^{circular} blades in positions to cooperatively cut the
11 material and to maintain a cutting gap between said cutting
12 edges;

A1
13 a frame having first and second legs and a yoke
14 interconnecting said legs;

15 means for rotatably supporting said first and second blade
16 shafts respectively in said first and second legs;

17 means for releasably connecting said cutter head to said
18 supporting unit;

19 ^{cf 2/29/2000} means for ^{releasably} ~~non-positively~~ connecting one of said two circular
20 blades to said motor of said driving unit; and

21 means for transmitting drive motion provided by said driving
22 ^{cf 2/29/2000} unit to the other of said ^{circular} blades. --
